

Your demo field guide

A few clicks. The whole order journey.

1. Build your basket

Open the live demo. Keep the sample tote and mug, or use the plus/minus controls to change quantities. The demo total updates immediately. "Show me how" opens the instruction bubbles; Escape closes them.

2. Try an approved payment

Choose Approved and select Run sample checkout. Open the order journey. The sample approval creates one paid order and a queued handoff. Simulate warehouse acceptance, then simulate shipment to see sample tracking.

3. Explore a decline

Return to checkout and choose Declined. Run the sample checkout and inspect the record. No paid order or fulfillment request is created.

4. Investigate an uncertain result

Choose Uncertain and run checkout. Open payment review, simulate a gateway lookup, then record the verified approval. The demo finds the original approval; it does not submit a new charge.

5. Pause the warehouse

In Orders & fulfillment, pause the demo warehouse. Approve a new checkout. Its paid order stays queued. Resume the warehouse, then accept and ship the selected order.

6. Explore the business model

Open Revenue model. Choose Pilot, Grow, or Scale and adjust the assumptions. The estimate includes software subscriptions and order automation before costs. Payment residuals and setup fees are excluded.

Reset and limitations

Reset demo clears sample activity and restores the calculator defaults. Reloading also clears activity. All customers, products, payments, shipments, and tracking are simulated. No card details or live credentials are required.
